The Art of War in an Age of Peace Michael O'Hanlon 2021-05-25 An informed modern plan for post-2020 American foreign policy that avoids the opposing dangers of retrenchment and overextension. Russia and China are both believed to have "grand strategies"--detailed sets of national security goals backed by means, and plans, to pursue them. In the United States, policy makers have tried to articulate similar concepts but have failed to reach a widespread consensus since the Cold War ended. While the United States has been the world's prominent superpower for over a generation, much American thinking has oscillated between the extremes of isolationist agendas versus interventionist and overly assertive ones. Drawing on historical precedents and weighing issues such as Russia's resurgence, China's great rise, North Korea's nuclear machinations, and Middle East turmoil, Michael O'Hanlon presents a well-researched, ethically sound, and politically viable vision for American national security policy. He also proposes complementing the Pentagon's set of "4+1" pre-existing threats with a new "4+1" biological, nuclear, digital, climatic, and internal dangers.

Conservation Laws and Open Questions of Classical Electrodynamics M Ribaric 1990-04-02 The monograph reflects the current standard of knowledge about the open questions considered, taking care to collect and collate all the relevant ideas, facts and formulae which have been until now widely scattered throughout the

literature. For the first time, these aspects are collated in book form. Care is taken to clarify the issues, give a systematic collection of conditions which prospective solutions of these open questions have to meet, and gather and collate various useful theoretical concepts and results. Contents: Conservation Laws of Classical Electrodynamics: Basic Equations of Classical Electrodynamics Conservation Laws for a Continuous Electromechanical System Electrodynamics Steady States Lorentz-Covariant Formulations Electromagnetic Radiation Energy and Linear, Angular and Boost Momenta Radiated by a Charged Mechanical Medium Comparison of the Properties of Maxwell and Electrodynamics Densities of Energy, Linear and Angular Momenta, and Their Flows Physical Significance of the Retarded Lorentz-Gauge Potentials Classical Pointlike Charged Particles Pointlike Charge Motion of Classical Pointlike Charged Particles in External Force Fields Asymptotic Behaviour of Trajectories of Classical Pointlike Charged Particles in Response to a Small and Slowly Changing External Force Readership: Theoretical physicists and applied mathematicians. Punk CX Adrian Swinscoe 2019-10-15 LIMITED EDITION - 7'x7' HARDBACK - ORIGINAL CONCEPT Emerging in the 1970s, prog rock was often accused of being overly technical, too elaborate, not focused on its audience and often in danger of disappearing up its own a---! One could argue that the service and experience space is starting to exhibit some of the same characteristics namely it's in danger of becoming overly technical, benchmarked, frameworked, measured, codified, certified, specialized and functionalized etc etc. Punk exploded out of the back of prog rock with its democratic, DIY, back to basics approach that inspired both a cultural and musical movement and change in mindset. It dared to be different and was OK with the fact that not everyone liked that. So, is it time to consider what a punk rock version of CX would look and feel like, particularly given that many reports suggest that around 70 percent of customer experience projects fail to deliver on their promises? If so, what would that look and feel like. Adrian Swinscoe in his new book 'Punk CX', tackles some of these questions and shares some key insights and practical takeaways that will allow you harness your inner punk and transform your own customer experience.

How to Build Supercharged and Turbocharged Small-Block Fords Bob McClurg 2005 The supercharger and turbocharger in their various forms and applications have both been around for well over a century. What makes them so popular? Looks, power, performance, sound, and status. And how do they relate to, and improve upon, the performance level of a small-block Ford pushrod V-8 engine like a 289-302, a 351-Windsor, a Ford 351-Cleveland, or even the latest generation 4.6L/5.4L "modular" small-block V-8 engines? That's EXACTLY what this book is all about! While Ford

dabbled in supercharging and turbocharging on production cars all the way back in 1957 with the legendary Thunderbird, and then again with Shelbys and over-the-counter kits, and then again in the late '70s and early '80s with turbocharging 4-cylinder applications in Mustangs and SHOs, the real revolution in supercharging and turbocharging Ford products has come through the aftermarket in more recent times. The Fox Mustang, created in 1979, and the platform that would eventually feature fuel injection in 1986, allowing much more boost, created a genre of lightning-quick and affordable performance cars.

Marginalised Communities in Higher Education Neil Harrison 2021 "Drawing on examples from nine countries across five continents, this book offers anyone interested in the future of higher education the opportunity to understand how communities become marginalised and how this impacts on their access to learning and their ability to thrive as students. Focusing on groups that suffer directly through discriminatory practices or indirectly through distinct forms of sociocultural disadvantage, this book brings to light communities about which little has been written and where research efforts are in their relative infancy. Each chapter documents the experiences of a group and provides insights that have a wider reach and gives voice to those that are often unheard. The book concludes with a new conceptualisation of the social forces that lead to marginalisation in higher education. This cutting-edge book is a must read for higher education researchers, policy makers, and students interested in access to education, sociology of education, development studies, and cultural studies"--
