The Undersea Network Nicole Starosielski
2015-02-25 In our "wireless" world it is easy to take the importance of the undersea cable systems for granted, but the stakes of their successful operation are huge, as they are responsible for carrying almost all transoceanic Internet traffic. In *The Undersea Network* Nicole Starosielski follows these cables from the ocean depths to their landing zones on the sandy beaches of the South Pacific, bringing them to the surface of media scholarship and making visible the materiality of the wired network. In doing so, she charts the cable network's cultural, historical, geographic and environmental dimensions. Starosielski argues that the environments the cables occupy are historical and political realms, where the network and the connections it enables are made possible by the deliberate negotiation and manipulation of technology, culture, politics and geography. Accompanying the book is an interactive digital mapping project, where readers can trace cable routes, view photographs and archival materials, and read stories about

the island cable hubs.

Ageing with Smartphones in Ireland

Pauline Garvey 2021-05-06 There are not many books about how people get younger. It doesn't happen very often. But Ageing with Smartphones in Ireland documents a radical change in the experience of ageing. Based on two ethnographies, one within Dublin and the other from the Dublin region, the book shows that people, rather than seeing themselves as old, focus on crafting a new life in retirement. Our research participants apply new ideals of sustainability both to themselves and to their environment. They go for long walks, play bridge, do yoga and keep as healthy as possible. As part of Ireland's mainstream middle class, they may have more time than the young to embrace green ideals and more money to move to energy-efficient homes, throw out household detritus and protect their environment. The smartphone has become integral to this new trajectory. For some it is an intimidating burden linked to being on the wrong side of a new digital divide. But for most, however, it has brought back the extended family and old friends, and helped resolve intergenerational conflicts though facilitating new forms of grandparenting. It has also become central to health issues, whether by Googling information or looking after frail parents. The smartphone enables this sense of getting younger as people download the music of their youth and develop new interests. This is a book about acknowledging late middle age in contemporary Ireland. How do older people in Ireland experience life today? Praise for Ageing with Smartphones in Ireland 'An innovative and thorough description and analysis of how one small piece of technology has changed the way Irish people live their lives.' Tom Inglis, Professor Emeritus of Sociology in University College Dublin

Exploring Robotics with ROBOTIS Systems

Chi N. Thai 2017-07-31 This 2nd edition textbook has been expanded to include of 175 additional pages of additional content, created in response to readers feedback, as well as to new hardware and software releases. The book

presents foundational robotics concepts using the ROBOTIS BIOLOID and OpenCM-904 robotic systems, and is suitable as a curriculum for a first course in robotics for undergraduate students or a self-learner. It covers wheel-based robots, as well as walking robots. Although it uses the standard "Sense, Think, Act" approach, communications (bot-to-bot and PC-to-bot) programming concepts are treated in more depth (wired and wireless ZigBee/BlueTooth). Algorithms are developed and described via ROBOTIS' proprietary RoboPlus IDE, as well as the more open Arduino-based Embedded C environments. Additionally, a vast array of web-based multimedia materials are used for illustrating robotics concepts, code implementations and videos of actual resulting robot behaviors. Advanced sensor interfacing for gyroscope, inertial measuring unit, foot pressure sensor and color camera are also demonstrated.

The Source Tara Swart 2020-11-17 For the first time, a Neuroscientist and Senior Lecturer at MIT reveals the surprising science that supports The Law of Attraction as an effective tool for self-discovery and offers a guide to discovering your authentic self to access your best life now. Self-help books like *The Secret* show us that if we can tap into "The Law of Attraction," we have the power to change our destiny simply by reshaping our mind. Millions of people have used the ancient systems of

manifestation and visualization to find health, success, love, friendship, wealth, and more. But does the "Law of Attraction" actually work? And more important, is this kind of life-changing philosophy within reach for everyone, even the most skeptical among us? As Dr. Tara Swart, psychiatrist, neuroscientist, and Senior Lecturer at MIT shows us in *The Source*, if we can strip away our skepticism, these ancient tools of manifestation and visualization are fundamentally powerful and incredibly effective at freeing us of self-limiting behaviors and propelling us toward our truest, most authentic selves. Swart reveals how and why these systems actually work by offering the latest breakthroughs in neuroscience and behavioral psychology, including lessons in neuroplasticity, magneticism, emotional and logical thinking, and even hydration, self-care, and relaxation. Next, she describes her own journey from skeptic to believer, and guides readers through the scientific breakthroughs and personal revelations that changed her from an unhappy, close-minded, and disconnected woman wanting more from life, to a successful entrepreneur living with confidence, purpose, and joy. The truth is, most of the things we want--health, happiness, wealth, love--are governed by our ability to think, feel, and act--in other words, by our brain. Dr. Swart combines the insights and inspiration of *The Secret* with the practical lessons of *The Master Key System* to help a new generation fulfill their dreams. *The Source* is a rigorous, proven toolkit for unlocking our minds--and reaching our fullest potential.

ICT in Agriculture (Updated Edition) World Bank 2017-06-27 Information and communication technology (ICT) has always mattered in agriculture. Ever since people have grown crops, raised livestock, and caught fish, they have sought information from one another. Today, ICT represents a tremendous opportunity for rural populations to improve productivity, to

enhance food and nutrition security, to access markets, and to find employment opportunities in a revitalized sector. ICT has unleashed incredible potential to improve agriculture, and it has found a foothold even in poor smallholder farms. ICT in Agriculture, Updated Edition is the revised version of the popular ICT in Agriculture e-Sourcebook, first launched in 2011 and designed to support practitioners, decision makers, and development partners who work at the intersection of ICT and agriculture. Our hope is that this updated Sourcebook will be a practical guide to understanding current trends, implementing appropriate interventions, and evaluating the impact of ICT interventions in agricultural programs.

Handbook of Information and Communication Security

Peter Stavroulakis 2010-02-23 At its core, information security deals with the secure and accurate transfer of information. While information security has long been important, it was, perhaps, brought more clearly into mainstream focus with the so-called "Y2K" issue. The Y2K scare was the fear that computer networks and the systems that are controlled or operated by software would fail with the turn of the millennium, since their clocks could lose synchronization by not recognizing a number (instruction) with three zeros. A positive outcome of this scare was the creation of several Computer Emergency Response Teams (CERTs) around the world that now work - operatively to exchange expertise and information, and to coordinate in case major problems should arise in the modern IT environment. The terrorist attacks of 11 September 2001 raised security concerns to a new level. The international community responded on at least two fronts; one front being the transfer of reliable information via secure networks and the other being the collection of information about potential terrorists. As a sign of this new emphasis on security, since 2001, all major academic publishers have started technical journals focused on security, and every major communi-

conference (for example, Globecom and ICC) has organized workshops and sessions on security issues. In addition, the IEEE has created a technical committee on Communication and Information Security. The first editor was intimately involved with security for the Athens Olympic Games of 2004.

* For as long as she can remember, Grace Campbell has been told that she doesn't suit her name. But being graceful is no fun anyway. Growing up in a world of privilege and politics, she had a lot to feel confident about. But she was also a record-breaker when it came to feeling shame. Shame about sex, shame about rejection, shame about mental health. But over time, and with a 24 carat gold dose of female friendship, Grace has turned shame into a defiant sense of self. At only 27, Grace has got a lot to learn about being an adult, but she's already got a lot to share about being a disgrace, and how she came to be utterly, disgustingly, disgracefully proud of it. This is the book every young woman should read, and every young man should worry about.
