It is a book of great clarity and depth." Jim Crace "A wonderful historical romp through mankind's attempts to understand the constituents of matter." The Observer "What stuff is the world made up of? It is the history of this question which Paul Strathern tackles, and he brings to it two qualities unusual in the history of chemistry: readability and intelligibility. Not least he makes the chemists come alive." Roy Porter "Strathern is an entertaining guide, capable of marshalling a colourful cast of thinkers and experimentalists. It's a pleasure to find a popular book about chemistry." New Scientist In 1869 Russian scientist Dmitri Mendeleev was puzzling over a way to bring order to the fledgling science of chemistry. Wearing by the effort, he fell asleep at his desk. What he dreamt would fundamentally change the way we see the world. Paul Strathern tells the dramatic and entertaining story of humankind's quest to discover the fundamentals of chemistry, culminating in Mendeleev's dream of the Periodic Table. p.p1 {margin: 0.0px 0.0px 0.0px 0.0px; text-align: right; font: 12.0px 'PT Sans'; -webkit-text-stroke: #000000} p.p2 {margin: 0.0px 0.0px 0.0px 0.0px; text-align: right; font: 12.0px 'PT Sans'; -webkit-text-stroke: #000000; min-height: 15.0px} p.p3 {margin: 0.0px 0.0px 6.0px 0.0px; font: 12.0px Avenir; -webkit-text-stroke: #000000; min-height: 16.0px} p.p4 {margin: 0.0px 0.0px 6.0px 0.0px; font: 7.0px Avenir; -webkit-text-stroke: #000000; min-height: 10.0px} p.p5 {margin: 0.0px 0.0px 5.0px 0.0px; text-align: justify; font: 13.0px 'Avenir Next'; -webkit-text-stroke: #000000} span.s1 {font-kerning: none}

**Deep Work** Cal Newport 2016-01-05 One of the most valuable skills in our economy is becoming increasingly rare. If you master this skill, you'll achieve extraordinary results. Deep Work is an indispensable guide to anyone seeking focused success in a distracted world. 'Cal Newport is exceptional in the realm of self-help authors' New York Times 'Deep work' is the ability to focus without distraction on a cognitively demanding task. Coined by author and professor Cal Newport on his popular blog Study Hacks, deep work will make you better at what you do, let you achieve more in less time and provide the sense of true fulfillment that comes from the mastery of a skill. In short, deep work is like a superpower in our increasingly competitive economy. And yet most people, whether knowledge workers in noisy open-plan offices or creatives struggling to sharpen their vision, have lost the ability to go deep - spending their days instead in a frantic blur of email and social media, not even realising there's a better way. A mix of cultural criticism and actionable advice, DEEP WORK takes the reader on a journey through memorable stories -- from Carl Jung building a stone tower in the woods to focus his mind, to the social media pioneer buying a round-trip business class ticket to Tokyo to write a book free from distraction in the air -- and surprising suggestions, such as the claim that most serious professionals should quit social media and that you should practice being bored. Put simply: developing and cultivating a deep work practice is one of the best decisions you can make in an increasingly distracted world and this book will point the way.

The Periodic Table Coloring Book (PTCB) was received worldwide with acclaim. It is based on solid, proven concepts. By creating a foundation that is applicable to all science ("Oh yes, Hydrogen, I remember coloring it, part of water, it is also used as a fuel; I wonder how I could apply this to the vehicle engine I am studying...") and creating enjoyable memories associated with the elements science becomes accepted. These students will be interested in chemistry, engineering and other technical areas and will understand why those are important because they have colored those elements and what those elements do in a non-threatening environment earlier in life.

**Chemistry: An Atoms First Approach** Steven S. Zumdahl 2011-01-01 Steve and Susan Zumdahl's texts focus on helping students build critical thinking skills through the process of becoming independent problem-solvers. They help students learn to think like a chemists so they can apply the problem solving process to all aspects of their lives. In CHEMISTRY: AN ATOMS FIRST APPROACH, the Zumdahls use a meaningful approach that begins with the atom and proceeds through the concept of molecules, structure, and bonding, to more complex materials and their properties. Because this approach differs from what most students have experienced in high school courses, it encourages them to focus on conceptual learning early in the course, rather than relying on memorization and a plug and chug method of problem solving that even the best students can fall back on when confronted with familiar material. The atoms first organization provides an opportunity for students to use the tools of critical thinkers: to ask questions, to apply rules and models and to evaluate outcomes.
